

Hub Australia Wynyard

Flexible AV Solutions for the Modern Workplace

Hub Wynyard events room with presentation screens

Location: Hub Australia, Wynyard, Sydney

AV Integration: AV Projects

Solutions: Meeting rooms, video conferencing, presentations and events

A Workplace designed for different ways of connecting

[Hub Australia's](#) Wynyard location is a coworking space where member businesses meet clients, bring teams together and host training sessions and events. With a variety of spaces available, the audiovisual requirements extend from everyday meetings and laptop-based presentations to dedicated video conferencing and larger group gatherings. AV Projects delivered an integrated AV installation designed to accommodate these different uses, with systems tailored to the size and function of each space. Delivery was coordinated through MPA Builders as the head contractor.

Meeting rooms and video conferencing

The Wynyard installation incorporates a range of meeting environments, providing flexibility for members, visitors and staff. Smaller meeting rooms support laptop-based presentations and video calls, allowing users to connect their own devices and work with their preferred conferencing applications.

Four larger meeting spaces were configured as dedicated Zoom Rooms, with room controls for starting calls and managing camera and audio functions. Laptop connectivity also provides an alternative for presentations and meetings, while straightforward controls help the Hub team prepare the rooms for successive bookings. Together, these spaces accommodate different meeting requirements while giving users a choice in how they connect and collaborate.

Café and connected events space at Hub Wynyard

Events and cafe' spaces

Beyond the meeting rooms, the installation supports larger presentations, events and gatherings across the events room and café. The café features a motorised projection screen for large-format presentations, including town hall-style sessions. The events room incorporates conferencing and presentation capabilities to support a range of activities.

Room-combine functionality allows the events room and café to be connected when a session needs to reach both spaces, extending the venue's flexibility for larger gatherings. These capabilities enable Hub Wynyard to accommodate different event formats while making practical use of its available spaces.

An integrated audiovisual environment

The wider installation brings together conferencing, audio, video distribution and room control technologies to support the different room configurations. System configuration and AV networking connect the equipment across the venue, enabling the various spaces to operate according to their intended use.

Documentation provided at handover, including operating instructions, as-installed drawings and troubleshooting information, gives the Hub team a reference for managing the systems. The result is a flexible workplace environment where users can connect a laptop for a smaller meeting, use a dedicated conferencing room or bring multiple spaces together for a larger presentation.

Equipment supplied by Amber Technology

Amber Technology supplied selected equipment for the Hub Australia Wynyard project, including AVer conferencing solutions and supporting AV infrastructure.

The bill of materials included:

- 7 × AVer CAM520 Pro2 cameras, across two orders
- 9 × AVer VB342+ video bars, plus 2 expansion microphones
- 1 × Grandview GV-GRIPRC112H motorised screen

These products formed part of the wider installation delivered by AV Projects, supporting the project's meeting, conferencing and presentation requirements.

Part of a wider Hub Australia rollout

Hub Wynyard was one of 10 Hub Australia locations commissioned by AV Projects across five states and territories. The broader rollout included more than 30 Zoom Rooms of varying sizes and more than 25 bring-your-own-device (BYOD) meeting spaces. Together, these environments provide a range of options for video conferencing, presentations and collaboration across Hub Australia's locations.

The Wynyard project illustrates how different AV requirements can be addressed within one workplace, with solutions tailored to each space and the way it is used.
